'CoralWarm' European project for study on coral reefs and global warming

submitted by [kojиковac](#)

What will be the condition of Red and Mediterranean Sea corals in 100 years? What are the effects of seawater temperature and acidity increase on their health? These are among the questions to be answered by a new research project -- being officially launched this week -- which will be carried out by Israeli, Italian and Palestinian scientists.

Scienia.org is a social network offering you the very latest news headlines, references and resources from science journals, books and websites worldwide. Content associated with science and research is contributed by you, our users and members. There are currently several hundred thousand stories placed in over seventy categories, a content base that is steadily growing. Scienia.org covers news in all fields of the basic and applied life sciences (biology), the earth sciences (geography), chemistry, the health sciences, engineering, mathematics, and sciences
